

Project Build Fitter

At NIS Ltd, our Manufacturing team plays a critical role in bringing designs to life, ensuring complex engineering equipment is assembled, tested and delivered to the highest standards of safety and quality.

We are now looking for **Project Build Fitters** to join our Manufacturing Workshop team.

This is a hands-on role responsible for the assembly, modification and testing of equipment in accordance with engineering drawings and customer specifications. You'll work closely with a range of internal teams to ensure projects are delivered safely, efficiently and to the required quality standards.

Specific Areas of Responsibility:

- **Mechanical assembly and modification** — Assemble and modify equipment in accordance with engineering drawings, NIS procedures and customer specifications.
- **Inspection and testing** — Carry out in-process inspections, self-checks and functional testing to ensure assemblies meet required quality standards.
- **Test equipment operation** — Operate test equipment in accordance with engineering procedures and standards.
- **Shipment preparation** — Prepare completed assemblies for dispatch and shipment.
- **Installation and commissioning support** — Assist with equipment installation, commissioning and customer site activities where required.
- **Health, Safety and Quality compliance** — Maintain compliance with all Health, Safety, Environmental, Quality and Company procedures, promoting safe working practices at all times.
- **Issue identification and reporting** — Promptly raise assembly issues and non-conformances through Build Problem Sheets and escalate concerns to the Project Build Team Leader or Assistant Team Leaders.
- **Documentation and communication** — Provide updates on assembly progress, maintain build records and complete supporting documentation accurately and on time.
- **Team collaboration** — Work closely with Production, Engineering, Project Management, Supply Chain and other business functions to support successful project delivery.
- **Stakeholder liaison** — Liaise with contractors, subcontractors and customer representatives where required.
